

## *SplitVision chooses PacketFront Software's BECS and BBE*

**Stockholm 2014-04-29**, SplitVision, that operates and markets Borås' city network with more than 9.000 connected customers, continues the network modernization. After having decided on the infrastructure last year, SplitVision has now chosen PacketFront Software's BECS and BBE OSS/BSS systems to enable zero-touch service provisioning for all inhabitants of Borås. Splitvision is also planning to implement a service portal for end-customer self-provisioning using technology from PacketFront Software. This means that the end-customer will easily select and activate multi-play services from home.

PacketFront Software's partner NetNordic is going to implement BECS and BBE during Q2 2014 and will be responsible for operations and support of the system.

### *PacketFront Software*

*PacketFront Software's BECS platform delivers automated network management since 2001. BECS provides zero touch configuration, automated and programmable network configuration and service provisioning for any hardware and topology. Our active API enables easy and flexible integration to existing OSS/BSS systems. 100 operator customers in 23 countries have chosen BECS for efficient network operations.
